

Ideation Phase Empathize & Discover

Project Name	Crime Vision: Advanced Crime Classification with deep learning
Maximum Marks	4 Marks

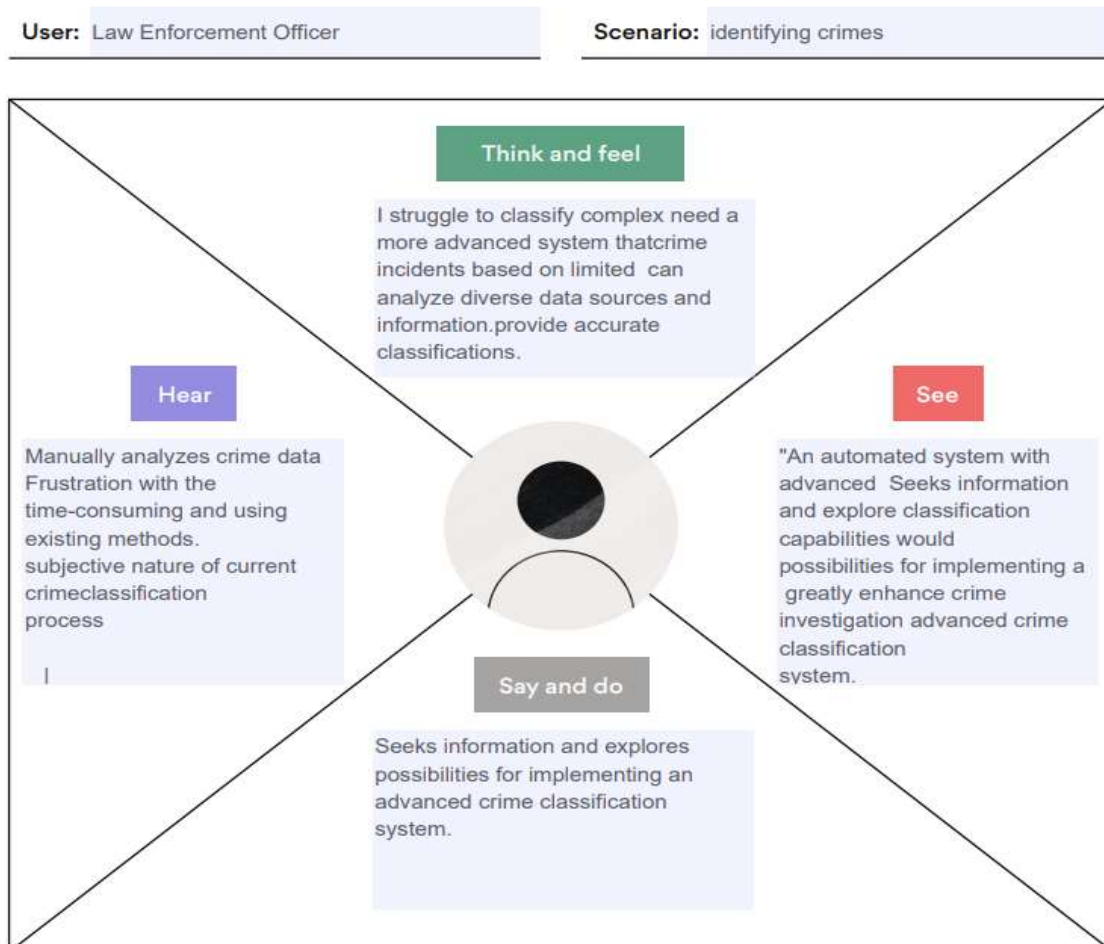

Empathy Map Canvas:

An empathy map is a simple, easy-to-digest visual that captures knowledge about a user's behaviours and attitudes.

It is a useful tool to help teams better understand their users.

Creating an effective solution requires understanding the true problem and the person who is experiencing it. The exercise of creating the map helps participants consider things from the user's perspective along with his or her goals and challenges.

Example: empathy map for advanced crime classification with deep learning

This empathy map focuses on the perspective of a crime analyst who uses an advanced crime classification system with deep learning. It captures their thoughts, feelings, actions, and goals related to crime classification.

Understanding the user's needs, frustrations, and aspirations can guide the development of a solution that addresses their pain points and empowers them with accurate and efficient crime analysis capabilities.
